A VIDEO LOG DAILY**

## SYSTEM HIGHLIGHTS

### VIDEO INTERCOM FOR ALL-ROUND SECURITY

An all-round security solution includes four parts: video intercom, access control, CCTV, and intrusion system. The Video Intercom Door Station acts as an additional IP camera within a connected NVR where recordings will also be stored.

### NOISE SUPPRESSION AND ECHO CANCELLATION

Noise and echo is one of the most common problems encountered in video intercom systems. During remote intercom connections, when the receiver sound level is up, or the ambient noise is relatively high, the microphone often picks up sounds and creates feedback. The resultant echo affects communication quality.

## EASY TO INSTALL, EASY TO MANAGE

When compared with traditional analog video intercom systems, installation and wiring for digital video intercom systems is much more convenient and flexible. Then, management software can be used across entire system for simple installation and adjustments, making the whole process quick and easy.

## PUSH NOTIFICATIONS AND REMOTE MONITORING

The HOMEONE IP intercom system\* supports app access and when the indoor station receives a call, the call data can be sent to the app. The user can answer a call on the app at any time, from anywhere.

\*(wired / wireless android / ios based touch screen)

## MULTIPLE VIDEO CONFERENCING

The indoor station\* functions as a free IP phone and supports one-touch quick dialling to any to any other indoor station within the same network, providing an additional method of communication among users.

\*(wired / wireless android / ios based touch screen)

## EASY TO MAINTAIN, EASY TO EXPAND

Access control management, alarm management and querying of various incidents can be performed swiftly via software on the IP intercom system. The intercom system can be managed according to the permissions granted to each user.

# VISITOR PROFILING AND FACE RECOGNITION

The use of face recognition in access control and time attendance has been an inevitable trend, which creates advantageous “touch-free” experience.
